

# PREMIUM COLOUR CHANGE

ARLON

FLITE  
TECHNOLOGY

The protective film protects the surface of the film during transportation and should be removed on a flat table **before the application process.**

## REMOVE PROTECTIVE FILM BEFORE INSTALLATION

The Gloss colours in the Premium Colour Change with FLITE Technology® range are manufactured with a protective film which is designed to enhance and maximise the gloss level of the product. Once removed, it leaves you with a smooth paint-like finish.

Remove the protective film on a flat table

Do not remove the protective film on a vehicle

The protective film should be removed prior to installation to minimize static and dust contaminants that could occur if removed during or post-installation.
